Linux DevOps Engineer

About us

CARGOMETER develops measurement systems for dimensioning freight without disruption to existing logistics processes. The main innovation of this measurement system is the capacity to measure, weigh and identify the cargo "on-the-fly" during forklift transport. This is the greatest leap forward in logistics technology since the introduction of the barcode.

CARGOMETER has been nominated for the Austrian Mobility Award. The company was declared Logistics Start-up of the Year in 2016 and was recently awarded the IFOY Award, the "Oscar" of the intralogistics sector. CARGOMETER counts four of the five largest general cargo logistics companies in Europe among its customers.

Your role

As a member of our development team, you will be working on an innovative 4D measurement system to deploy and monitor the system in a Linux environment. The priorities are process automation, up-time, robustness and optimization of the system.

Your duties will involve all aspects of system administration including maintenance, system design and implementation with the aim of improving the current setup and developing new services and features.

In addition, you will support the administrative team in all cloud services as well as basic IT-relevant issues.

Your profile

Sound Linux and network knowledge with experience in the areas
- Linux server administration (Nginx, Postfix, Debian-Packages, Backup, DRBD, GlusterFS, DNS)
- Network configuration and security
- Automated server setup and software deployment (Ansible)
- Virtualization (KVM, Docker,...)

- Monitoring and logging (Icinga2, Grafana, InfluxDB, ELK,..)
- VPN (strongSwan, OpenConnect, OpenVPN)
- Continuous integration (TeamCity)

The following knowledge is an advantage
- Programming knowledge in Python
- Database knowledge (PostgreSQL, MongoDB)
- Experience with Atlassian (Jira, Confluence,...) and Cisco products

What we can offer

- Opportunity to work as part of a highly motivated and dedicated team
- Scope of activity suited to your individual strengths
- Flexible working hours
- Full-time position
- The collective bargaining agreement defines a statutory minimum wage for the position of EUR 2.403,75. We offer a significantly higher remuneration according to your qualification.
