

High-tech company in Vienna is looking for software developer for our 3D computer vision application in a Linux environment.

## Senior Python Backend Developer

### About us

CARGOMETER develops measurement systems for dimensioning freight without disruption to existing logistics processes. The main innovation of this measurement system is the capacity to measure, weigh and identify the cargo “on-the-fly” during forklift transport. This is the greatest leap forward in logistics technology since the introduction of the barcode.

CARGOMETER has been nominated for the Austrian national award for mobility. The company was declared Logistics Start-up of the Year in 2016 and was awarded the IFOY Award, the “Oscar” of the intralogistics sector. CARGOMETER counts four of the five largest general cargo logistics companies in Europe among its customers.

### Your role

As a member of our development team, you will work on a new type of 3D measurement system and take responsibility for the development of RESTful web APIs, SQL (and NoSQL) database schemes as well as our web services in a Linux environment.

### Your profile

- You have extensive experience with Python, PostgreSQL and MongoDB technologies.
- You are experienced with automated software rollout (Ansible).
- A good knowledge of Javascript frontend frameworks, HTML and data visualisation in Metabase is an advantage.

### What we can offer

- Full-time position
- Opportunity to work as part of a highly motivated and dedicated team
- Scope of activity suited to your individual strengths and interests
- Flexible working hours
- The collective agreement for this position is minimum EUR 3.245,07. Your salary could be significantly higher, according to your qualification.
