CARGOMETER is a cutting-edge computer vision company. We are constantly growing our development team. For our vision applications we are looking for a

Python Backend Developer Senior (m/f/d)

About us

We at CARGOMETER develop measurement systems for dimensioning freight without disruption to existing logistics processes. The main innovation of our measurement system is the capacity to measure, weigh and identify the cargo "on-the-fly" during forklift transport. This is the greatest leap forward in logistics technology since the introduction of the barcode.

CARGOMETER has been nominated for the Austrian national award for mobility. The company was declared Logistics Start-up of the Year in 2016 and was awarded the IFOY Award, the "Oscar" of the intralogistics sector. We count four of the five largest general cargo logistics companies in Europe among our customers.

Your role

As a member of our development team, you will work on a new type of 3D measurement system and take responsibility for the development of RESTful web APIs, SQL (and NoSQL) database schemes as well as our web services in a Linux environment.

Your profile

- You have extensive experience with Python, PostgreSQL and MongoDB technologies.
- You are experienced with automated software rollout (Ansible).
- A good knowledge of Javascript frontend frameworks, HTML and data visualisation in Metabase is an advantage.

What we can offer

- Become a member of an award winning team of highly motivated, dedicated and brilliant engineers – we love to discuss innovative ideas
- Scope of activity suited to your (growing) individual strengths and interests
- Flexible working hours
- Our salary is based on your skills and experiences and will be in the range of € 60.000 to € 75.000 per year
